Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

WEATHER SYNOPSIS BY REGION

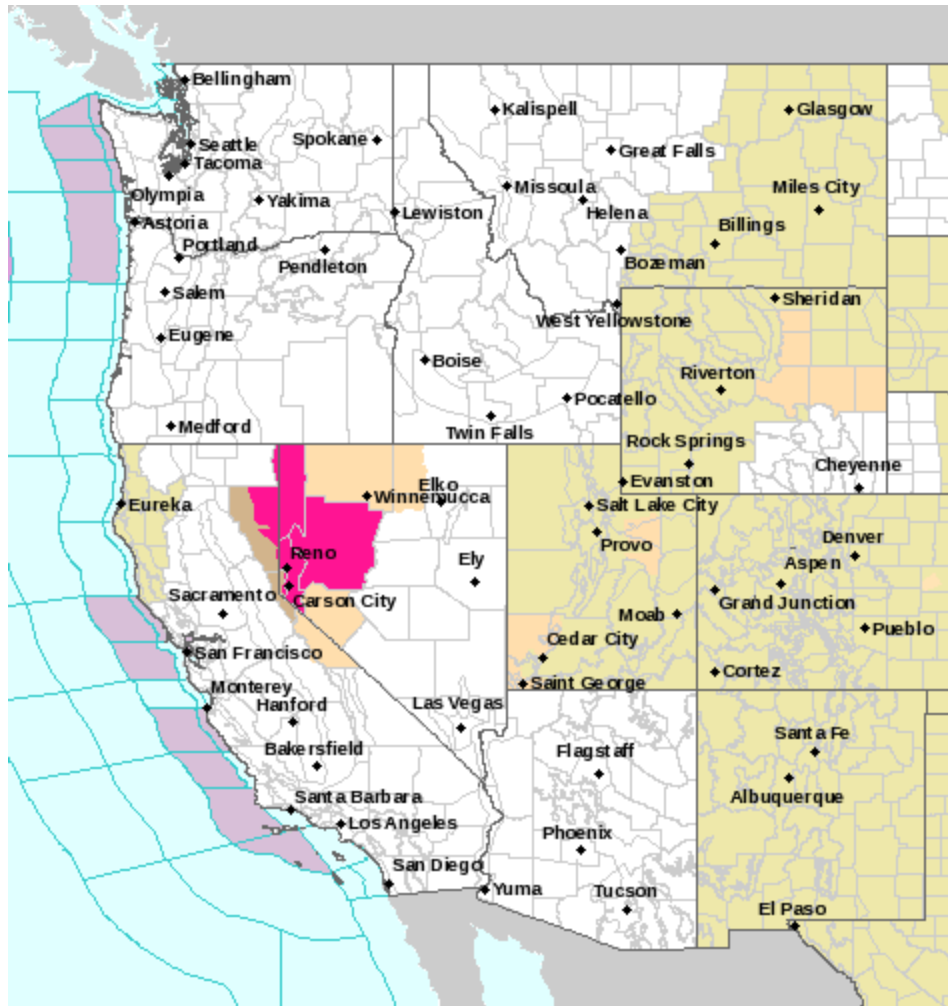

NORTHERN CALIFORNIA

The weather today will be much as it was yesterday, mostly sunny, dry and warm. A low pressure trough will be dropping south along the British Columbia coast and take over our weather pattern tonight through the weekend. Much cooler temperatures are coming to the region, dropping to as much as 10-12 degrees cooler than normal for the warmest inland valleys where afternoon highs will be in the low to mid 80s Friday through the weekend. A cold front will be moving ashore at that time to bring a reasonable chance of wetting showers to the far northern areas along a small chance of thunderstorms. Moderate to locally strong SW to W afternoon winds are likely to develop near and east of the Cascade/Sierra crest Saturday. Wind gusts of 30-45 mph are likely to become rather common, but humidity will probably not be all that low as can happen in these conditions. The cool trough will linger through the weekend before moving east with the chance of showers persisting in the far north areas into early Sunday. Early next week higher pressure with warmer, more seasonable temperatures and dry conditions appear likely to return.

SOUTHERN CALIFORNIA

A weak Pacific trough over the West Coast will continue to bring westerly afternoon winds of 15 to 25 mph with gusts to 40 mph to the mountain ridges and desert passes through Friday. These westerly afternoon winds will increase to 20 to 30 mph with gusts to 50 mph this weekend as a storm moves into the Pacific Northwest. Northwest to north winds of 15 to 25 mph with gusts to 40 mph will surface across the South Coast of Santa Barbara as well as the mountains of Santa Barbara, Ventura, and Los Angeles Counties late Saturday afternoon through early Sunday morning and again from late Sunday afternoon through early Monday morning. Temperatures will remain a little below normal through this weekend, with mid 70s to mid 80s across the mountains and mid 80s to mid 90s in the valleys. The marine layer will continue to be deep through this weekend, with morning low clouds and fog covering most coastal valley locations. High pressure will build into the region from the south bringing a warming trend to the area early next week. Winds will become much lighter early next week and the marine layer over the coastal areas will shrink substantially by Tuesday. Widespread minimum humidity in the single digits will continue across the deserts through early next week, otherwise minimum humidity will be mainly between 12% and 25% above and inland from the marine layer.
